

Energy Action Plan

Which two energy resources have the most pros and least cons?

For what renewable energy resource would you like to advocate (e.g., solar power)?

Write a persuasive paragraph to the "City Council" advocating for one energy source (or a combination of two).

Include how his energy source will benefit the community.

If you were to present this information to a real audience, who would it be and in what format would you make the presentation (film, article, poster, informational brochure, advertisement, oral presentation, etc.)? Give details; your plan may be chosen by the class to carry out.
